

Using GAE Launcher to Deploy Web Applications

Aim: To Use GAE Launcher to Deploy Web Applications

Procedure :

 **Step 1: Enable App Engine in Google Cloud Console**

1. Open Google Cloud Console:

 <https://console.cloud.google.com/appengine>

2. Click "Create Application"

3. Select a Region (e.g., `us-central`).

4. Choose a runtime:

- Select Python (if using Flask)

5. Click Next and Done

Step 2: Open Cloud Shell Editor

1. In Google Cloud Console, open Cloud Shell (terminal icon in the top-right).

2. Start Cloud Shell Editor: type

```
cloudshell edit
```

- This opens an online VS Code-like editor.

Step 3: Create Your Web App

Python Example (Flask)

1. Create the project folder:

```
mkdir my-app && cd my-app
```

2. Create a Python file:

```
touch main.py
```

```
nano main.py
```

3. Add this Flask Hello World code:

```
from flask import Flask
```

```
app = Flask(__name__)

@app.route('/')

def hello():

    return 'Hello, App Engine!'

if __name__ == '__main__':

    app.run(host='0.0.0.0', port=8080)  ``
```

4. Save the file (`CTRL + X`, then `Y`, then `Enter`).

Step 4: Create `app.yaml` for Deployment

1. Create `app.yaml`:

```
touch app.yaml
```

```
nano app.yaml
```

2. Add the following:

```
runtime: python39
```

```
entrypoint: python main.py
```

```
handlers:
```

```
- url: /*
```

```
script: auto
```

3. Save the file.

Step 5: Deploy the App Using GUI

1. Go to Google Cloud Console → App Engine.

2. Click "Upload Application".

3. Select your project folder (my-app).

4. Click Deploy.

Step 6: Access the App

Once deployed, open your web app:

`gcloud app browse`

or visit:

👉 `https://[YOUR_PROJECT_ID].appspot.com/``

Result: since GAE Launcher is deprecated we have used Use Cloud Shell & gcloud CLI instead to launch an web application Deployment is now done via ``gcloud app deploy``
